

Improve Driver Safety & Reduce Accidents

Berkley Human Services has contracted with SafetyFirst to provide its Safe Driver Monitoring Program at no additional charge to all qualifying policyholders with fleets of 15 or more trucks or vans.

Benefits of the Program:

- Measurable Results - Reductions in vehicle collisions are often reported by program users
- Changed Behaviors - Drivers often learn improved driving techniques and safe behaviors
- Time and Money - Savings on out of pocket costs (e.g. “deductible, maintenance, and wear and tear”) can be realized
- Training Materials - Includes an extensive library of training presentations on specific driving behavior topics and coaching resources for supervisors and managers

How the Program Works:

- The SafetyFirst Enrollment Coordinator explains the Program to qualifying policyholders, handles registration, confirms vehicle schedules, and ships decals for installation on policyholder vehicles
- Decals with SafetyFirst’s toll free number are affixed to the policyholder’s vehicles
- Welcome call from SafetyFirst on how to introduce the Program to drivers and affected managers
- Calls received about policyholder’s drivers are fielded promptly by SafetyFirst with fast turnaround to policyholder including incident reports and driver “coaching sheets”
- Customized reports are sent to designated directors, managers, and supervisors
